Antenna Installation

 There is a socket for antenna on the right side of the boat.
Just take rubber cap away if you want place the antenna.

2) Screw down the wisher and nut from the antenna extended , then hold the DC cable through the hole from inner housing, and Screw tighted the nut by an wrench.

3) Screw the antenna on boat

Wiring

After all the installatiion are finished, please connect the parts (transducer, antenna, battery) to the transmiter. Then fix the transmitter inner the boat.

	For display	For transmitter
Recomended voltage	6-12V	6-12V
Absolute Maximum voltage	14.8V	14.8V

-> Note: overvoltage may burn the elements in the device!

From bellow shows the voltage range of the most popular batteries in the market:

Battery Type	Voltage	Permission
12V Lead-acid	10.8v~14.8V	~
8*AA NiMH	7.8V~10.6V	
8*AA Alkaline	7.5V~12.8V	
2S Lithium	5.6~8.4V	0
3S Lithium	8.4~12.6V	\bigcirc
4S Lithium	11.2V~16.8V	8

12V	25
lead-acid	Lithium
8AA	35
NiMH	Lithium
8AA	45
Alkaline	Lithium

Using Instruction

1) Please do not put the display on ground during the operation, which could cause a short R/C distance.

The proper way is using an tripod to support the display, and keep it at least 1.2m above the ground.

2) Make sure the antenna is tighten on the boat, otherwise the R/C distance will be greatly shorten.

Key function

Menu	Open Menu settings; Switch between menus
Ent	Finalizes menu selections; confirm a setting
Up arrow	Move up to select menu; increase a value of option
Down arrow	Move down to select menu; decrease a value of option
Power & Exit	Turns unit on/off. Also be use to quit a menu setting

→ Note: during the unit working, you can press the UP arrow to "freeze" the screen. Press any key will unfreeze the screen.

What's on the display

In most time the default setting is enough. However in some situation, to get a better using, you need adjusting the menu setting.

1) Sensivity

Determines how echoes will be displayed on the screen. Increasing the sensitivity will make you see more details on the screen. In deep water, increasing the sensitivity.

whereas in shallow decreasing the sensitivity.

How to set a Sensivity?

- 1) Press MENU Key, and use keypad to choose [Sensivity]
- 2) Press ENT key to conform the selection.
- 3) Press **UP arrow/Down arrow** key to increase/decrease the value.
- 4) Press ENT key to confirm the setting.

2) Fish ID. Sens.

Fish ID. Sens. adjust the threshold of fish size display Selecting a higher setting allows weak returns being displayed as fish, which is helpful especially when you are intending to find smaller fish species or bait fish.

Selecting a low setting will prevent weak sonar returns being displayed as fish, which will be very helpful when you are seeking large species of fish.

Sensitivity		
Auto	Í ļ
